

Roger Albuquerque

Fullstack Web Developer

Fullstack developer specialized in technologies such as ReactJS, React-Native, Typescript, NodeJs, MySQL, MongoDB, among others. Currently in the last period of college, I have worked as a freelancer using the languages mentioned. I have exceptional quick thinking skills and a strong user orientation, which allows me to deliver high quality projects, on time and with great customer satisfaction. I have leadership qualities and tend to be intensely involved in the projects I work on. I have good communication skills and always strive to help people around me.

Freelance

Freelance Fullstack Developer

As a freelance web developer, I worked on several projects for clients from different sectors and industries. With my skill in programming languages and databases, I was able to create customized and efficient solutions that met the needs of each client.

<https://github.com/RogerAlbuquerque/Waiter-App>

WaiterApp

- Design of an application to help in restaurants, divided into a mobile application that the waiter has where he goes to each table and takes each customer's orders and sends the order via the app's backend to the frontend application located in the kitchen. There they look at the orders and which tables each order is destined for. Depending on the preparation status, the status changes whether the order is being prepared, whether it is on hold or whether it has been completed.
- This app was made with React, React Native, Nodejs, and all the communication between them was made with WebSocket and Socket.io

<https://github.com/RogerAlbuquerque/HairApp>

HairApp

- Freelance mobile project entirely made with react-native, NodeJs and more. An app to manage and schedule clients in a hairdressing salon, where the client has an area to book an appointment for a cut, and the hairdresser has an administrative area where he assists clients who wish to schedule an appointment and the hairdresser confirms whether he is available at the time or no, and when confirming it changes the customer's status in the customer area
- App with login functions, user registration, password security...
- App feito com React-Native, Nodejs, MongoDB, JWT Tokens, more...
